SUMMARY

Senior API Integration Specialist with 10+ years of experience architecting and delivering enterprise-scale API integration solutions across cloud and hybrid environments. Proven expertise in Spring Boot, webMethods, BizTalk, Apigee, and API gateway technologies, with a strong background in event-driven architecture, pub/sub models, canonical data standards, and secure authentication protocols. Successfully led cross-functional integration initiatives that reduced system latency by 45%, improved API reliability to 99.99% uptime, and accelerated partner onboarding by 60%. Recognized for technical leadership, architecture governance, and driving best practices in API lifecycle management, CI/CD automation, and production support across global enterprise ecosystems.

TECHNICAL SKILLS

- frontend: React, Angular, JavaScript, TypeScript, HTML5, REST API consumption, API documentation portals
- backend: Java, Spring Boot, .NET, C#, Node.js, Microservices Architecture
- api management: Apigee, webMethods, BizTalk, API Gateway, OpenAPI/Swagger, Postman, OAuth2, JWT, SAML
- integration: REST, SOAP, Pub/Sub, Event-Driven Architecture, Kafka, Canonical Data Models, ESB
- cloud: AWS (API Gateway, Lambda, EC2, S3), Azure (Logic Apps, Service Bus), Hybrid Integration
- devops: Jenkins, GitHub Actions, Docker, Kubernetes, CI/CD, Infrastructure as Code
- databases: Oracle, SQL Server, MySQL, MongoDB
- operating systems: UNIX/Linux, Shell Scripting, VM-based environments
- security: TLS/SSL, OAuth2, OpenID Connect, Role-Based Access Control (RBAC), API Threat Protection
- documentation: Architecture Diagrams (Visio), Deployment Guides, Technical Specifications

WORK HISTORY

SyenApp

Jan 2023 – Current

Senior Full Stack Developer

- Architected and implemented enterprise-grade API gateway solutions using Apigee and Spring Boot microservices, enabling secure external partner integrations and internal service communication, reducing integration latency by 42%, improving throughput by 38%, and achieving 99.99% uptime across 200+ production APIs while enforcing OAuth2, JWT, and RBAC security controls aligned with enterprise compliance standards.
- Designed and deployed end-to-end hybrid integration solutions connecting on-premise UNIX-based financial systems with AWS cloud microservices, leveraging REST/SOAP APIs, pub/sub messaging patterns, and canonical data transformation models, reducing manual data reconciliation by 65% and accelerating data synchronization cycles from 4 hours to under 20 minutes.
- Provided technical leadership across 12 cross-functional engineering squads, establishing API design standards, OpenAPI governance frameworks, versioning strategies, and CI/CD automation pipelines that decreased deployment errors by 55% and improved release frequency by 70% without impacting system stability.
- Led enterprise API modernization replacing legacy monolithic integrations with event-driven microservices architecture, introducing Kafka-based pub/sub messaging and containerized Spring Boot services, resulting in 48% improvement in scalability and 35% infrastructure cost optimization annually.
- Authored comprehensive architecture documentation, including logical and physical architecture

diagrams, API lifecycle documentation, deployment guides, and operational runbooks, improving onboarding time for new engineers by 50% and reducing production incident resolution time by 33%.

- Directed troubleshooting and root cause analysis for high-severity production integration incidents, implementing performance tuning and optimized thread management strategies that reduced critical incident recurrence by 60% and improved API response times by 28% under peak load.
- Collaborated with security and compliance teams to implement TLS encryption standards, OAuth2 token validation flows, and secure API authentication models for third-party integrations, successfully passing 100% of internal security audits and external compliance assessments.
- Mentored 15+ engineers on integration best practices, API lifecycle management, and hybrid deployment strategies, elevating overall team capability and contributing to a 30% improvement in engineering productivity metrics across enterprise integration initiatives.

Apple

Jan 2021 – Dec 2022

Senior Frontend Developer

- Designed and developed 180+ REST and SOAP APIs using Spring Boot and BizTalk orchestration workflows, enabling seamless integration with external shipping carriers and customs systems, reducing partner onboarding time by 58% and increasing automated transaction processing volume by 72%.
- Implemented webMethods ESB solutions integrating legacy on-premise ERP systems with cloud-based logistics platforms, leveraging canonical data models and transformation services that improved cross-system interoperability and reduced data mismatch errors by 63%.
- Architected hybrid integration pipelines connecting Azure Service Bus messaging systems with on-premise UNIX-based applications, creating pub/sub-driven event architectures that increased system resiliency by 44% and reduced message loss incidents by 80%.
- Led enterprise API governance initiatives establishing naming conventions, API lifecycle policies, and performance monitoring dashboards, improving API reuse by 47% and decreasing redundant development efforts across teams.
- Automated CI/CD pipelines for integration services using Jenkins and containerized deployments via Docker and Kubernetes, cutting deployment cycle time by 60% and improving release confidence with zero-downtime deployments.
- Diagnosed and resolved complex integration performance bottlenecks in production environments, implementing caching strategies and optimized SQL queries that improved response time SLAs by 35% and reduced system resource utilization by 25%.
- Coordinated with external global partners to design secure authentication mechanisms leveraging OAuth2 and certificate-based mutual TLS authentication, ensuring secure cross-border API communications and maintaining 100% compliance with international security standards.
- Provided mentorship and code reviews for integration developers, improving code quality metrics by 40% and reducing post-release defects by 52% across enterprise API integration projects.

WiseTech Global

Apr 2018 – Nov 2020

Senior Developer

- Designed scalable API microservices handling over 20M monthly transactions, leveraging Spring Boot and RESTful architecture patterns, achieving 99.98% system availability and improving transaction processing speed by 33%.
- Implemented Apigee-based API gateway management including traffic throttling, threat protection policies, and analytics dashboards, improving API security posture by 45% and reducing malicious traffic attempts by 70%.
- Developed event-driven integration workflows utilizing Kafka and asynchronous messaging to decouple services, enhancing scalability by 50% and reducing system dependency failures by 36%.
- Engineered hybrid integration architectures connecting AWS-hosted services with on-premise databases via secure VPN and encrypted REST endpoints, reducing manual operational tasks by 62%.

- Built canonical data transformation layers ensuring consistent cross-platform communication standards, decreasing data inconsistency issues by 57% across distributed applications.
- Authored deployment guides, technical design documents, and architecture diagrams, accelerating customer implementation timelines by 41% and enhancing solution clarity for stakeholders.
- Optimized API performance through load testing and JVM tuning, reducing average response times from 850ms to 420ms under peak traffic conditions.
- Trained junior engineers and conducted integration workshops, increasing team API design proficiency scores by 38% and fostering best-practice adoption across development teams.

Trio Workforce Solutions

Apr 2016 – Feb 2018

Full-Stack Developer

- Built REST and SOAP APIs using .NET and Spring Boot enabling payroll, HR, and workforce systems to integrate seamlessly, increasing data processing automation by 68% and reducing manual reconciliation errors by 54%.
- Designed BizTalk-based orchestration workflows supporting complex HR onboarding processes, decreasing processing time from 3 days to under 6 hours and improving compliance accuracy to 99.7%.
- Developed UNIX shell scripts for automated deployment and monitoring of integration services across VM-based environments, improving system uptime by 22% and reducing manual deployment effort by 48%.
- Implemented role-based authentication and API security policies using OAuth2 and JWT tokens, strengthening security controls and preventing unauthorized access incidents by 75%.
- Led production support and root cause investigations for integration failures, reducing mean time to resolution (MTTR) by 37% and improving customer satisfaction metrics by 29%.
- Collaborated with business analysts and stakeholders to translate integration requirements into technical solutions, achieving 96% first-pass acceptance rate for delivered solutions.
- Introduced monitoring dashboards and logging frameworks, increasing visibility into integration health metrics and reducing reactive support incidents by 43%.
- Contributed to architecture reviews and long-term integration strategy planning, influencing platform modernization efforts that reduced legacy system dependency by 31% over two years.

EDUCATION

The University of Texas at Dallas – Bachelor's Degree in Computer Science

Dallas, TX | (Nov 2010 – Jan 2014)
