

SKILLS

API Management Platforms:

Spring Boot, webMethods, BizTalk, Apigee

Programming Languages:

Java, JavaScript, Shell scripting, HTML, CSS

Cloud & Infrastructure:

AWS, Docker, Jenkins, Linux/Unix, VM-based environments

Security & Protocols:

OAuth 2.0, SSL/TLS, API Gateway security, Encryption standards

Integration Architectures:

REST, SOAP, pub/sub, hybrid cloud, on-premise and cloud integration

Tools & Technologies:

Git, Maven, CI/CD pipelines, API documentation tools, monitoring and analytics solutions

Standards & Best Practices:

API versioning, security compliance, scalable API design

EDUCATION

Bachelor Degree in Computer Science

Rochester Institute of Technology

August 2013 - July 2017

SUMMARY

With over nine years of experience in software development and system integration, I have specialized in designing and implementing complex API solutions using a variety of tools and platforms. My expertise includes working with API management platforms such as Spring Boot, webMethods, and BizTalk, along with cloud integration technologies. I am adept at leading technical projects, developing comprehensive documentation, and resolving intricate integration challenges to meet business objectives.

EXPERIENCE

SOLUTE

Senior Software Engineer | August 2017 - January 2026

- Led the development of a RESTful API platform for the client's logistics management system, utilizing Spring Boot and Java, which improved data throughput by 30% and reduced response times.
- Designed and implemented an enterprise API gateway solution incorporating API security protocols and OAuth 2.0 standards, enhancing overall system security and compliance.
- Developed a hybrid cloud on-premise integration solution for financial data synchronization using webMethods, enabling seamless data flow between legacy systems and AWS cloud services.
- Spearheaded the migration of legacy SOAP APIs to modern REST APIs, leveraging Spring Boot, which decreased API maintenance costs by 25%.
- Built comprehensive API documentation, architecture diagrams, and deployment guides for multiple projects, ensuring consistency and ease of onboarding for new team members.
- Collaborated with cross-functional teams to define integration requirements for a client's supply chain platform, resulting in a scalable API architecture supporting over 10 million transactions daily.
- Troubleshoot and resolved complex API integration issues in production environments, including data inconsistencies and latency problems, reducing incident resolution time by 40%.
- Implemented security protocols and encryption standards for sensitive data exchanges, ensuring compliance with industry regulations such as GDPR and HIPAA.
- Mentored junior engineers on best practices for API design, security, and testing, fostering a culture of continuous improvement.
- Conducted code reviews and performance tuning for high-traffic APIs, improving system stability and scalability.
- Integrated third-party APIs for payment processing and identity verification, streamlining client onboarding workflows.
- Developed automated testing frameworks for API validation,

reducing manual testing efforts by 50%.

- Participated in architecture reviews and contributed to the development of enterprise API governance policies.
- Managed deployment pipelines using Jenkins and Docker, facilitating continuous integration and deployment workflows.
- Collaborated with DevOps teams to optimize cloud infrastructure for API hosting, resulting in a 20% reduction in hosting costs.
- Implemented API versioning strategies to ensure backward compatibility and smooth client transitions.
- Led efforts to implement API analytics and monitoring tools, enabling proactive issue detection and performance optimization.
- Supported client onboarding with custom API integrations, ensuring adherence to security and performance standards.
- Developed shell scripts for automation tasks related to deployment and system health checks on UNIX-based servers.
- Contributed to the development of internal tools for API lifecycle management, improving operational efficiency.
- Facilitated knowledge sharing sessions on API best practices and emerging technologies within the engineering team.
