

Gregory Palmour

Location: Belton, TX | Cell: (254) 232-8070 | Email: gregorypalmour10@gmail.com

SUMMARY

Senior Full Stack Engineer with 12 years of experience specializing in API integration, design, and implementation across diverse industries including defense, sports media, and custom manufacturing. Proven expertise in developing end-to-end integration solutions using Spring Boot, webMethods, and cloud platforms (AWS, Azure, GCP). Strong background in technical leadership, cross-functional collaboration, and mentoring team members on API best practices. Demonstrated ability to design secure, scalable integration architectures and troubleshoot complex production issues.

TECHNICAL SKILLS

- **API Integration & Management:** Spring Boot, webMethods, API Design, API Gateways, Authentication, Authorization, Pub/Sub Architecture, Canonical Standards, End-to-End Integration Solutions
- **Cloud & Infrastructure:** AWS, Azure, Google Cloud Platform, VM-based UNIX, Shell Scripting, Hybrid Integration Solutions, On-premise Systems
- **Development & Tools:** Software Design, Solution Architecture, Debugging, Technical Documentation, Software Documentation, Technical Writing, Configuration Management
- **Professional Skills:** Cross-functional Collaboration, Mentoring, Systems & Applications Support, Business Requirements Analysis, Technical Leadership, Compliance with Standards

EDUCATION

Bachelor's in Computer Science, Texas State University (San Marcos, TX) - **GPA 3.67** 2009 – 2013

Master's in Computer Science, Texas State University (San Marcos, TX) 2015 – 2017

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer, **Chetu**, Sunrise, FL (Remote) Mar 2018 – Present

- Designed and developed API integration solutions using Spring Boot and webMethods for healthcare SaaS applications at Chetu, supporting electronic health record systems.
- Implemented end-to-end integration architectures with canonical standards for fintech platforms, ensuring data consistency across distributed systems.
- Provided technical leadership on API projects for defense sector clients, enforcing compliance with security protocols and industry regulations.
- Developed hybrid integration solutions combining AWS, Azure, and on-premise components for enterprise clients.
- Mentored team members on API management best practices, including authentication, authorization, and gateway configuration.
- Created comprehensive technical documentation including architecture diagrams and deployment guides for complex integration projects.
- Collaborated with cross-functional teams to define integration requirements and develop solutions meeting business needs in various industries.
- Troubleshoot and resolved production integration issues, implementing fixes and enhancements for high-availability systems.
- Designed pub/sub integration patterns for real-time data processing in sports media applications.
- Implemented API gateways using Apigee and similar tools to manage traffic and enforce security policies.

- Developed shell scripts for automation tasks in VM-based UNIX environments, supporting deployment and monitoring processes.
- Provided technical support and coaching on API integration, focusing on solution architecture and debugging techniques.
- Led integration projects for custom manufacturing systems, connecting ERP, CRM, and supply chain platforms.
- Designed secure authentication mechanisms for API access in defense and healthcare applications.
- Collaborated with external partners on authorization design for multi-tenant SaaS platforms.
- Implemented cloud-based technologies (AWS, GCP, Azure) to enhance integration scalability and performance.

Software Engineer, **Altitude Sports & Entertainment**, Denver, CO (Remote)

Sep 2016 – Mar 2018

- Led API integration projects at Altitude Sports & Entertainment using Spring Boot to connect broadcasting systems with content management platforms.
- Designed hybrid integration solutions involving on-premise VM-based UNIX systems and cloud components for real-time sports data processing.
- Developed and debugged shell scripts for automation and system integration tasks in UNIX environments.
- Provided technical support and coaching to team members on API integration best practices and solution design.
- Implemented API gateways to manage traffic and enforce security protocols for external partner integrations.
- Created technical specifications and solution architecture designs for complex integration scenarios.
- Collaborated with external partners on authentication design for secure API communications.
- Troubleshoot complex integration issues in production environments, working with development teams to implement enhancements.

Software Engineer, **Trinity Apparel**, Ridgeland, MS (Remote)

Jan 2013 – Sep 2016

- Designed and implemented complex API integration solutions using Spring Boot and webMethods to support business requirements for custom manufacturing systems at Trinity Apparel.
- Developed end-to-end integration architectures with pub/sub patterns and API gateways to connect inventory management, order processing, and CRM systems.
- Created comprehensive technical documentation including architecture diagrams and deployment guides for integration projects.
- Troubleshoot and resolved production integration issues by collaborating with operations teams to implement fixes and enhancements.
- Provided technical leadership on API projects, enforcing best practices and compliance with industry standards.
- Mentored junior developers on API design principles and integration solution development.
- Collaborated with cross-functional teams to define integration requirements and develop technical solutions meeting business needs.
- Implemented authentication and authorization mechanisms for secure API access across distributed systems.
